

# YOUR ADAM™ 5¼" DISK DRIVE WILL PERFORM BETTER WITH Nashua DISKETTES!

Your new Disk Drive is a state-of-the-art accessory that allows fast, efficient information retrieval. And since all the data you store is important to you, Coleco recommends you use Nashua diskettes.

Nashua diskettes are high-quality magnetic media, endorsed by many of the world's leading computer companies. Each Nashua diskette is made in the U.S.A. and subjected to rigid standards of quality control. They're certified error-free, and guaranteed for life by the manufacturer against any defects in material or quality under normal use. That's why we've chosen to include a **free** Nashua 5¼" blank diskette as a bonus with your Disk Drive. Once you've experienced Nashua quality, you won't want to settle for anything less . . . and you shouldn't have to! Nashua diskettes are available in most places where fine computer products are sold.

One important way you can use the Nashua blank diskette is to make a spare copy of your Disk Manager (DOS) diskette on it . . . This should be done as soon as possible to protect your files . . . For easy-to-follow instructions on how to copy it, please see page 23 of your Owner's Manual.
