

FUTUREVISION

PRESENTS VIDEOTUNES

WHAT IS VIDEOTUNES?

VideoTunes is a music program designed specifically for your ADAM Computer. With it, you can compose, play and save music.

VideoTunes gives you a four octave note range and the ability to play up to three notes at a time. The VideoTunes screen displays both the treble and bass staves. Four octaves of piano keys appear at the bottom of the screen. There is one key for each of the notes in the four octave note range. Each key is identified by letter (See diagram on page two).

WHAT CAN YOU DO WITH VIDEOTUNES?

You can perform several functions with VideoTunes by using the keypad and/or the joystick control.

- * You can add notes to either staff
- * You can delete notes from either staff
- * You can change note measure
- * You can sharp or flat notes in a score of music
- * You can add a sharp, flat, natural or rest to an individual note
- * You can scroll the music score to the left or right
- * You can change the tempo of the music
- * You can specify the key the music will be played in
- * You can play the music

In addition, you can stop playing the music at any point (in the score) and pick up playing where you left off. You may also step through the music by playing one note at a time. You may save the music on a data pack and play it or modify it later.

(OVER)

VIDEOTUNES IS ENTERTAINING. . .

VideoTunes comes with several musical selections ready for you to hear. You may enter notes from any sheet music you might have and you can create your own musical compositions.

AND EDUCATIONAL.

VideoTunes was designed to help you learn music. When you move the cursor up and down the staff, a small red note moves along the piano keys. Since each piano key is labelled, and corresponds to a position on the staff, you can easily identify the notes on the staff. (If you are currently learning Music Theory, you can apply the many features of the VideoTunes Program directly to your music). VideoTunes comes with simple instructions explaining how to use each feature and function.

EXPERIMENT WITH VIDEOTUNES!
