Dear Adam User,

We are very happy at this time to offer you many new items. Being the only full service dealer and distributor for Adam computer products, it has left us with a great responsibility. M.W.RUTH CO. won't let you down. We will continue to sell all supplies and programs for the ADAM. This catalog has been created as an encyclopedia of 3rd party software and supplies. We hope you will use this as a reference guide. If you see programs that are not in this catalog, please inform us. In some cases the programs are not being produced any more. But don't worry, we will update this catalog with new programs and supplies. If you move, let us have your change of address, so we can keep you updated with our mailings, since many new people and companies are coming out with new programs and supplies. By supporting us, you support the ADAM. This catalog as stated will include mostly 3rd party products. We still have in stock some of the products that Coleco produced. Some quantities from Coleco are limited. Please call or write for prices and status with Coleco made products only. We can control our inventory with 3rd party products, just place your order, and we will ship your complete order immediately. You may see ads that say super fast shipping, but according to what people tell us they must wait a month or two and more. This is the reason we stock what we sell. Every item listed here can be used in the Coleco Adam Computer.

If you have developed software, and/or hardware for the Adam, we will be happy to sell it for you, just contact us.

BOOKS & LEARNING AIDS - ADAM

A ROADRUNNER PUBLICATION

Please note that all of our publications are written for the Adam user who wishes to know more, and perhaps wishes to develop his talents in areas of machine useage which he is not presently capable. The authors are trained in teaching techniques, and are dedicated to help those who wish to learn.

HACKERS HELPERS SERIES

FROM BASICS TO BASIC (AD-Book) \$15.00 A preparatory text. A beginner text for new hackers. What every serious computer user needs to know. A beginners look at a computer. Follows the development of the modern computer, and in the process develops the solutions to the problems which the scientists faced. The reader will finish this book with an understanding sufficient to allow him to begin to program computers in the language of the machine. He may then be classified as a beginning 'Hacker'. Contains thorough explanations of the number systems used in the computer and why they are required, the makeup of the microprocessor and how it works, the way the instructions are used, the RAM's and ROM's and how they work with the microprocessor & illustrates the use of the machine language instructions in writing a program, and submitting it to the microprocessor.

Volume I, LEARNING TO READ WITH ADAM (AD-BOOK) \$25.00 A Z80 machine language instructions, some specifically, and a great many generally as the author develops the disassemblies of all that transpires after the reset button is activated.

The disassemblies are detailed and discuss many of the more curious aspects of several of the machine language instructions as they are being used in the Operating System of the computer. The object is to study how professional programmers have used the instructions, with a view toward having the reader become more familiar with the useage thereof. The initialization of the Operating System is disassembled as it refines itself; and then the initialization routine searches for a media to 'BOOT' into RAM. At this point the author assumes that the media contains the Basic language program, and the whole process of booting that program and loading it into RAM, and then jumping to its operation is followed.

The complete set of machine language instructions is printed, but

without specific comment on each, other than those used in the disassemblies. The unique feature of this listing, is that the decimal equivalents are given. No other known work provide s these decimal values which are essential to the entering of machine language programs into RAM via Basic; the most common form of machine language entry for the beginner.

More examples of how to enter machine language programs are given, with the idea of promoting direct use of existing subroutines in the Operating System by reader.

DISASSEMBLIES - BASIC (AD-BOOK) \$25.00 The complete Basic program is disassembled. All separate routines are separated by title of function. Invaluable for the Hacker who wants to follow the disassemblies with a view toward CALLing these subroutines directly, or revising them to accomplish his own designs.

EXTENDED OPERATING SYSTEM (AD-BOOK) \$15.00 The complete Operating System is disassembled. All routines are separated by title of function.
