The basic Powermate product consists of the Powermate interface board, a 2 or 4 drive external disk drive enclosure, all necessary interface cables, and all software needed to operate the Powermate with the ADAM. The interface board (which mounts in ADAM expansion slot #2) contains two RS-232 serial ports, a Centronics compatible printer port, the expansion memory board port, and the external disk enclosure interface port. The Powermate 2 external enclosure contains the disk subsystem power supply, the disk controller board, a hard disk drive, and space for mounting a second disk drive (either a second hard disk drive or a floppy disk drive). The Powermate 4 external enclosure includes all the standard features of the Powermate 2 but has provisions for adding a second hard disk drive and up to 2 floppy disk drives.
