

# DEFENDER

(c) 1983 AtariSoft

Defender is not compatible with the Stand Alone ADAM Computer and CBS Electronic's French-Scart ColecoVisions. However, two patches to the rom code were developed (in the mid-80's and a new patch developed in 2013 by Nanochess) which fixed the issue of the radar screen.

CBS Electronics in conjunction with ADAM's House/eColeco released this patched rom code on a cartridge with a replica AtariSoft cart label. The only change in the label was that "ColecoVision" was replaced with "ADAM".
