OPA LOCKA, FL. 33055

This is but one of possible sets of moves for the Game 2010 TEXT. You may set your own stop points for saving your moves, at any place that you choose, (by the amount of work done, -- or the time that you have worked,-- or that you may want to stop and rest). Then restart again, at a later time, rested and refreshed,---next day or so. rested or the next day or so.

Be reminded that you will have time to repair several different items of equipment. But-- you need to repair--ONLY-- those items that are absolutely necessary. (or may become necessary because of mismoves, that you may make), to the restarting and sending the Ship on its way back to EARTH. All other problems are not needed or are there just for diversion. Mistakes change the number of moves you make in your solution, giving you less time to complete. You may find that short moves in the dark may be necessary, any injuries may be repaired later. These moves as shown have been tested and run to complete a full game.

You must remember, in my previous solutions, I cautioned you about making mistakes causing changes in the moves used later in the game being different from the same place in previous games played.

Plan each move carefully, and record each move you make, for later review, and changes.

Read these moves from left to right.

TO START--PUT IN THE GAME (disk-tape) PULL RESET.

VI READ

VI READ

This is the point at which you will restore the games moves, that you have saved.

Use the STORE/GET Key, wait for the special keys to show on the screen, then use the appropriate key for your needs.

v To Hub	< In Hub	< In Hub
< In Hub	^ To Bridge	III Drop B Suit III
III Drop Food III	II Drop G Suit III	v To Hub
< In Hub	^ To HAL'S Rm.	VI Open Panel V
VI Reconnect All MODULES V	VI Turn HAL On V	v To Hub
> In Hub	v To ELECTRONICS RM.	HOME VI II I II III

You will now TEST all boards and note each bad one by the sound of each test.

VI TEST Ship'S HYPOTHALAMUS V	VI TEST HAL'S HYPOTHALAMUS V	VI TEST FRONTAL MODULE V
----------------------------------	---------------------------------	-----------------------------

VI TEST LIMBIC
MODULES V

VI TEST CEREBELLAR
MODULES V

VI TEST SENSORIMOTOR
MODULES V

Which board unit that is bad will change positions with mistakes, and the sequence that they show bad, so the repair boards may have to be different then the ones shown on this print out, you can change accordinly. There should be two (2) boards bad for each sequence change.
